FUTURE

At COMPAC® we firmly believe in the strength of our talent, in the power of our minds to transform matter into valuable and innovative materia.

Our ambitious urge to design surfaces capable of transforming and beautifying homes, spaces and buildings, creating exciting sensations and long-lasting solutions, has allowed us to reach heights that others only find dizzying.

We know that our strength lies in the talent of each member of our projects, in a model of ongoing collaboration that allows us to create opportunities that challenge all of our limits.

Thanks to this way of thinking and acting - which we like to call "Minds over Matter" - we can produce incredible and exciting projects. It's an intellectual, technological and creative journey that is sure to inspire the most demanding clients in the world.

The beauty of dreams

GENESIS

CREATED BY ARIK LEVY

GENESIS is the beginning of everything; the origin of nature, and of matter. The origin of an idea, a creative process that seeks to change the status quo of surface coverings. It is the most ambitious collection from COMPAC®, offering a series of surfaces in which technology, design and art come together to create something that has never been seen before.

For such an inspiring endeavour, we collaborated with a truly disruptive and transgressive mind, someone who can see beyond: the artist and designer Arik Levy.

VISION

*Growth through
innovation by making
ideas happen.*

After years of exploring texture and volume, forging an exceptional reputation, COMPAC® is determined to enter a new dimension.

Not afraid of embarking on new paths by laying the foundations of new challenges, COMPAC® has created a new tool that will revolutionize the customer experience in the architecture and interior design sectors.

Dreams are often unreasonable, illogical and desirable in society. Ideas from a fantasy world which have no place in our "real world". Everything within the scope of our lives begins with a thought. A simple thought that can often turn into something colossal.

*Learn how to grow
while preserving
your independent
decision-making
spirit.*

Those dreams - the mental notions of an idea - are things that make life worth living, waking up and following the desire of the heart. Willing to go further.

It comes down to the inner fire that drives us to live life the way we feel we should, rather than how we are told we should. Creating and following our own path.

Let your heart speak.

Unfold your dreams

PERFORM

No obstacle is ever too big to prevent you to reach your goal.

The outcome of years of research and development has culminated in Atelier™, a fabric of high technical qualities with COMPAC®'s surface design printed on it. Achieving a tangible oxymoron: A foldable genesis surface.

The depth and sharpness of the veins and designs allows looking at the same design of the surface on a fabric tool. Being able to appreciate even the smallest detail. An exquisitely crafted work.

With this new, innovative, revolutionary, disruptive and lightweight tool, COMPAC® has managed to transform the user experience for specifiers in the field of design, interior design and architecture. Disciplines that every day demand both better materials and methods for a world in constant evolution.

Atelier™, wants to give rise to the imagination and prescriptive capacity to take beyond the art and magic of prescribing surface designs, both horizontal and vertical.

The applications and uses of COMPAC® designs are infinite, considering both spaces (kitchens, bathrooms, dining rooms, living rooms, furniture and outdoor) and uses (worktops, floors, sinks, claddings, walls, facades or bathrooms).

Atelier™ allows you to dress any surface, lending a hand to magic and looking closely to how a dream can become reality.

Patent Pending

Atelier™ teaches
us that seeing
is believing.

The perfect tool to show continuous large-size veining designs on broad surfaces in a weightless way.
