

SAFETY RECEIPT FORM

COMPAC® encourages a safe work environment, promoting the highest health and safety standards to all collaborators, suppliers, distributors, fabricators, stonemasons, installers or customers.

With this aim, COMPAC® share the Good Practice Guide (the "Guide"), Safety Data Sheets ("SDS"), Safety Labels ("Labels"), and other resources (Hereinafter all as "The Safety Documentation") at the disposal of professional collaborations who work, handle, prepare, process, and install all the products of COMPAC®.

Although The Safety Documents includes information and recommendations related to occupational safety and health, IN NO CASE IS THIS GUIDE EXHAUSTIVE OR SUBSTITUTIVE OF THE LEGAL OBLIGATIONS IN REGARDS OF HEALTH AND SAFETY UNDER THE APPLICABLE LOCAL REGULATIONS. Always obtain advice from your administration and from a professional industrial hygienist to implement the occupational safety measures required to meet the regulatory requirements and to mitigate the exposition to dust, as the required safety measures depend on the specific conditions of the workplace.

Employers are responsible for informing and training their workers in Health and Safety matters, and for assuring that the workplace complies with all applicable occupational health and safety regulations. It is strongly recommended to consult with a local competent professional occupational hygienist to adequately protect these workers.

Signing this document acknowledges that you fully understand the health and safety risks of working with silica, and that you agree to adhere to the safety standards required for handling and fabricating this material as is outlined in our Guide and SDS that have been provided to you and are available on our website.

I, the undersigned, hereby confirm that I have received from you the COMPAC® Guide, the COMPAC® SDS and the Labels, and that I read and understand how to access more detailed and updated information online, regarding the requirements for safe handling, fabrication and installation of COMPAC® products.

I acknowledge the importance of The Safety Documents, the hazards of working with crystalline silica and the measures of protection as described in the Guide. I commit to implementing all the safety measures required for handling and fabrication this material and I commit to share it to all employees and companies involved in handling, installation, fabrication or wherever any process related to the use of COMPAC® products.
